

COST Action CA15224

Identifying causes and solutions of keel bone damage in laying hens

Training School on Avian Bone Histology 16th-17th January 2019

Venue; The Roslin Institute, Easter Bush Campus near Edinburgh.

Training School for the histological investigation of avian bone.

Objectives of the training school include familiarising attendees with the;

- 1) Special features of avian bone.
- 2) Range of basic methods available to investigate the morphometry of avian bone.
- 3) Methods to process and cut avian bone.
- 4) Methods for identifying and staining features of avian bone.

Attendee numbers will be limited to ensure access to microscopes. We would like to prioritise individuals with plans to work with avian bone.

Interested persons should send a short application (1 paragraph) to heather.mccormack@roslin.ed.ac.uk by **30.11.2018**.

The following information should be included:

1. Reason why you want to attend the training school and how you will benefit from it.
2. Grant amount requested to cover travel, accommodation and meal allowance (for more details see also [COST Vademecum](#) pages 28-29)
